

The Key Benefits of Renting VoIP

Why not lower your total cost of ownership with a rental solution? Renting a VoIP system (known as 'Hosted IP Telephony') cuts the typical private branch exchange (PBX) system start-up costs by up to 90% through the delivery of a virtual PBX while reducing monthly phone bills by 50%.

Free on-net calls

- Calls between sites connected to broadband telephony are free of charge.

Reduced calling costs to other locations

- Local and national calls at 1.1p, all mobile networks at 10.9p and the majority of European destinations at 1.4p.

Improved communications

- By connecting branches and enabling personal call management, broadband telephony improves productivity, ensures that employees work more closely together and that customers are handled more efficiently.

Zero investment

- There's no need to invest in PBXs, BT lines or any traditional telephony hardware, all of which are made redundant by broadband telephony.

Simplified administration and ease of use

- Broadband telephony's easy-to-use administration tools guarantee reduced operational costs, simplified administration and easy monitoring of usage.

Nomis Connections is able to provide its customers with a Voice over IP (VoIP) hosted PBX service, a small business phone system alternative that allows small to medium-sized businesses (SMB) anywhere in the UK to employ an unlimited number of extension options and enjoy geographic independence and flexibility.

Normally, to achieve the same benefits and features of a hosted solution you would need to invest in a phone system and telephone lines to be installed at your premises. Hosted IP Telephony is delivered via

Broadband IP or SIP channels. With a feature-rich telephone and options that include a unique direct dial inbound (DDI) telephone number for every extension for staff located in the same building or spread around the UK, Hosted IP Telephony lowers most SMBs total cost of ownership for phone services.

Hosted IP Telephony cuts the typical private branch exchange (PBX) system start-up costs by up to 90% through the delivery of a virtual PBX while reducing monthly phone bills by 50%.

Hosted IP Telephony service is designed with simple self-service tools for complete system and extension control.

For organisations that require a full-service configuration and change contract, these features are included in Hosted IP Telephony service for the same price.

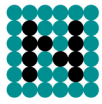

In addition to enjoying benefits from the Hosted IP Telephony solution - such as unlimited calls to the UK for a low, flat monthly fee - companies subscribing to Hosted IP Telephony can eliminate the overhead cost associated with bricks and mortar buildings with the use of this VoIP PBX system by operating out of different locations without losing any powerful PBX functionality or having to pay premium local and long distance charges for inter-office calling.

Some of the many impressive features of Hosted IP Telephony

Unlimited Calling

Using the Internet backbone for routing telephone calls substantially reduces phone bills:

- to any telephone number in the UK (on unlimited extensions);
- extension-to-extension anywhere in the world;
- free calls to and from any other subscribers on the same platform.

Auto-Attendant

A powerful automated system that can replace the need for a receptionist:

- available to callers 24-hours-a-day with multiple schedules and greeting;
- transfers calls (dial by extension or name);
- if call is not answered or the line is busy, automatically will send the caller to defined destination;
- customisable with pre-recorded prompts for several regularly used recordings such as sales, support, tech support, billing, account, etc.

Full Featured Conference Bridge

An audio conferencing system that provides a way to hold meetings involving participants at multiple sites:

- saves travel time and expense for meetings;
- use with Hosted IP Telephony extensions and outside callers;
- up to 20 sites can participate;
- administrator mode allows for making outbound calls and dropping parties;
- unlimited conference calls can be scheduled and in session concurrently;
- password protected for creation and admission;
- automatic email and voice prompt confirmations of conference bridge reservation.

Business-class Voicemail

A powerful tool when you cannot answer the phone:

- up to 8 pre-recorded greeting options (full name, internal, external, after-hours, lunch, meeting, weekend, holiday);
- password protected;
- voicemail to email;
- listen to voicemails via attached email, through supplied phone or remotely;
- one number access allowing follow me search;
- dialling out of voicemail.

Administrative Controls

Hosted IP Telephony includes an administration web portal for all PBX, auto-attendant, ring groups and complete extension control.

Extension Manager

Allows users the ability to control all extension settings including busy, ring-no-answer, and Internet outage handling ring duration and forwarding destinations. Other settings in Extension Manager including forwarding rules, one number access, caller ID blocking, call waiting disable and other unique settings.

Switchboard

A great live answer application that runs on a PC and works in conjunction with the Hosted IP Telephony phone to assist operators and secretaries in seeing extension status indicators and provide quick and accurate call answering and distribution controls.

... and many more features and benefits!

Pricing & Options

Hosted IP Telephony provides the variety of extensions options, inbound calling options, and call handling applications. Prices depend on how many extensions you require.
