Network Security and PCI compliance

The best way to secure your business

With rising levels of malicious and criminal activity focusing on stealing business and consumer data, along with an ever-increasing focus on data protection legislation and industry-led compliance programmes, it has never been so important for businesses of all types and size to have a robust security and compliance enabling solution.

Sentry from Nomis Connections provides a comprehensive and cost effective way of providing:

- **Network access security for both hard wired and Wi-Fi environments**
- **Managed firewall**
- **Content filtering**
- **Malware and intrusion alerts**
- **PCI DSS Level 1 certified protection**
- **3G/4G failover**
- **Simple VPNs – Secure and encrypted**
- **Internet usage and performance stats**

For your business, network security is not only the sensible action to take, but it is also what's required by UK Data Protection Legislation and Payment Card Industry Data Security Standards (PCI DSS).

Our Sentry solution is a fully managed security service that will comprehensively protect your business's LAN environment from unwanted access and activity.

Additionally, it has specific accreditations for card payment security because it's PCI DSS Level 1 certified – the first in the world to achieve this.

PCI DSS Level 1 'certified' solution

Sentry is perfect for those businesses taking card transactions in line with PCI DSS compliance. Our service is Level 1 compliant, which means it not only addresses a large part of your PCI requirements, but also helps to protect you from breach fines, something non-certified solutions can't do.

Affordable Protection

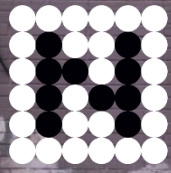

Our solution is delivered as a fully managed subscription-based service, so there is no need for you to invest in software, hardware or additional personnel. The system will watch over your business day and night, monitoring all network activity and acting proactively to block threats.
